PROFILE SUMMARY

I'm a Software Engineer and a Full-Stack .NET Web Developer with 4 years of experience building, maintaining, and debugging enterprise web applications. My professional experience has focused on ASP.NET Core, ASP.NET MVC, REST APIs, SQL Server, and production support across UI, backend, and database layers. I also build practical side projects using React, TypeScript, Python, FastAPI, cloud deployment, workflow automation, and AI integration features.

PROFESSIONAL EXPERIENCE

.NET Developer (Mid Level) | **Ascendion Digital Solutions Inc.**

01/2024 – 02/2026, Makati - remote

Engineered enterprise web application features for Cebuana Lhuillier's Insurance Management System, supporting business workflows across multiple branches. Worked across ASP.NET Core, REST APIs, SQL Server, Entity Framework, stored procedures, query optimization, and production issue investigation across UI, API, and database layers.

Junior .NET Developer / Application and Tech Support | **Hi-Precision Diagnostics**

02/2023 – 05/2023, Quezon City - onsite

Worked on internal enterprise web and Windows applications used across nationwide branch operations. Handled application enhancements, bug fixes, user support, basic server monitoring, and issue investigation across application, database, and environment layers using Angular JS, .NET, SQL Server, and production support practices.

Associate .NET Web Developer | **BasecampTech HQ Company**

09/2017 – 12/2018, San Juan - onsite

Built and maintained web application features for e-commerce and business websites. Worked on frontend and backend updates, bug fixes, and database-backed workflows using .NET, JavaScript, HTML, CSS, Bootstrap, and SQL-based application development.

Independent Contractor / Freelance Developer

2021 - Present | Remote / Project-Based

Since 2021, I have been building practical web applications, business systems, automation tools, and SaaS-style projects outside my full-time roles. My independent work focuses on API-backed applications, workflow automation, cloud-deployed projects, and AI-assisted features using technologies such as .NET, React, TypeScript, Python, FastAPI, SQL databases, Docker, Vercel, Azure, and modern integration tools. I have also handled international client support and coordination for Windows and web applications, including issue investigation, requirements clarification, and application troubleshooting.

EDUCATION

Bachelor of Science - Computer Science **University of Caloocan City**

03/2014 – 04/2018, Caloocan City

Awarded: Best Thesis Project, CSD Thesis Exhibit 2018

Developed and embedded a mini computer box module - AMISS (Autonomous Motorcycle Security System), an IoT-based solution using RaspberryPi and Python. Implemented features including real-time GPS tracking, mobile app integration for remote monitoring, engine immobilization (forced stop), alarm triggering, and one-click remote lock/unlock functionality to enhance vehicle security.

SKILLS

C#, VB.NET, ASP.NET Core, ASP.NET MVC, React, Next.js, TypeScript, JavaScript, HTML, CSS, Tailwind CSS, Bootstrap, REST APIs, Entity Framework Core, Dependency Injection, JWT/OAuth, API Integration, API Gateways, Webhooks, Background Jobs, Hangfire, SQL Server, Azure SQL, PostgreSQL, Stored Procedures, Query Optimization, Redis, Azure App Service, Vercel, Docker, GitHub Actions, Linux, systemd, Nginx, DNS / Custom Domains, SSL, Layered Architecture, Modular Monolith, Clean Architecture, SOLID Principles, Repository Pattern, Agile/Scrum, Production Debugging, Python, FastAPI, AI Integration, LLM Integration, Prompt Engineering, n8n, Make.com, Zapier, API-based Workflow Automation.
